Phani Kumar Pandaraboina AI/ML Engineer

phaniyadav881@gmail.com 9398868928 Hyderabad LinkedIn GitHub

Professional Summary

B.Tech Data Science graduate with hands-on experience building and deploying Generative AI applications using Python, LangChain, RAG pipelines, Prompt Engineering. Built an AI-powered Resume Screening System and a YouTube Video Analyzer deployed on AWS EC2 with LLM observability using Langfuse. Published projects on Hugging Face Spaces. Seeking an entry-level AI Engineer or Python Developer role with a focus on building LLM-powered solutions using LangChain, RAG pipelines.

Education

Bachelor's of Technology - Data Science, St. Ann's College of Engineering and Technology 2022 – 2026

Generative AI Program, Innomatics Research Labs 2026
Coursework: Python, SQL, OOPs, FastAPI, REST APIs, ML, DL, Generative AI, LLMs, LangChain, RAG

Technical Skills

Programming Languages: Python, SQL
AI / GenAI: LangChain, RAG, LLMs, Transformers, Prompt Engineering, FAISS, ChromaDB, Hugging Face, ML/DL Fundamentals
APIs & Models: Gemini API, Groq API, OpenAI API, LangChain LCEL
Cloud & Deployment: AWS EC2, Hugging Face Spaces, Streamlit Cloud
Observability: Langfuse (LLM tracing & monitoring)
Frameworks & Tools: FastAPI, Streamlit, REST APIs, MySQL, Git, GitHub, Swagger UI, VS Code, Jupyter

Internships

1) Artificial Intelligence , Aimers Society 10/2025 - 12/2025
- Built and tested AI/ML models using Python for intelligent application development.
- Gained hands-on exposure to machine learning concepts and model evaluation basics.

2) Generative AI Internship , SmartBridge Educational Services Pvt Ltd. 01/2026 - 03/2026
- Completed hands-on training in Generative AI, LangChain, RAG, and Cloud AI services using Python and Groq API.
- Practiced advanced prompting techniques and Templates to improve model responses.

Projects

1) AI-powered YouTube Video Analyzer
- Built an AI-powered YouTube analyzer that extracts transcripts and generates structured insights, saving review time.
- Deployed the application on AWS EC2 and configured environment variables for reliable deployment.
- Integrated Langfuse for LLM tracing to monitor prompt tokens, latency, and chain execution.
- Built prompt-engineering workflows using LangChain and Groq's Llama-3.1-8B-Instant model.
- Implemented sentiment analysis on engagement metrics (likes, views, comments) and visualized insights with Streamlit.

2) AI-Powered Resume Screening System
- Built a RAG-powered ATS Resume Screener using Python, LangChain, and FAISS to automate resume-to-job matching
- Parsed PDF resumes with PyPDF2, chunked the text, and stored embeddings in FAISS for semantic search
- Built a retrieval pipeline using the Job Description as a query to fetch the most relevant resume chunks
- Integrated Gemini API with Pydantic schemas to generate a structured, accurate ATS match score
- Refined prompts within the RAG pipeline to accurately retrieve and match resume details and improving scoring relevance.

3) Banking Management System
- Developed REST APIs using FastAPI for account creation, deposits, withdrawals, and balance inquiries.
- Integrated MySQL database to store and manage customer account data using CRUD operations.
- Tested and documented all API endpoints using Swagger UI to ensure reliability and ease of testing.
- Implemented input validation and error handling to manage invalid transactions and edge cases.
- Built an interactive Streamlit dashboard for users to perform banking operations through a simple UI.

Certifications

Python (NPTEL) | Generative AI (Internship) | Artificial Intelligence (Internship) | Cloud Computing (NPTEL) | IoT (NPTEL)
